

Zae Smiles / UNMONITORED — Project Handoff

This file is auto-loaded by Claude Code at the start of a new session in this project. It summarizes everything done in the prior session so a fresh chat can pick up without re-deriving context.

Who this is for

Isaiah "Mitch" Nguaike, 21, social psychology content creator.

pseudo-element that sweeps in from the left on hover and recedes to the
right on hover-out. This is the ****exact CSS extracted from mavgpt.ai's own
stylesheet**** (confirmed via devtools), just recolored to gold. Reuse this
class for any future "text link with a cool underline" ask instead of

reinventing it.

- TrackersSecti.on .t.sx (the Project 30 OK lives tat.s.c.ar.d) used to live

inside Hero, was moved to its own section below Hero on Home — don't put it back inside Hero's grid.

Analytics gathered this session (real data — do not fabricate more)

Source: user-uploaded Instagram PDF export (Aug 12–Sep 11, 2026) and 4 TikTok Excel exports (Overview/Content/Viewers/Followers, Aug 15–Sep 11, 2026). Full numbers are in the /partnerships MediaKit page. Headline figures:

- Combined followers ~12.

Known issues / gotchas

1. **Preview-deployment images can render blank.** `*.vercel.app` preview URLs (not production) sometimes fail to serve embedded `<img>/next/image` sub-resources due to a Vercel deployment-protection cookie/cache race — the file itself is fine (confirmed by navigating to the image URL directly, which always works). `unoptimized` is set on all `mitch.png` `<Image>` usages as a partial mitigation. ****Don't panic-debug a blank photo on preview**** — check production, or navigate to the image URL directly to confirm the file is really fine before assuming a code bug.
2. **Never trust an unauthenticated check** (PowerShell `Invoke-WebRequest`, `curl`, etc.) **against a preview `*.vercel.app` URL** — deployment protection returns a 200 with an HTML challenge/shell page instead of real content or a clear error. Always verify preview deployments through the user's already-authenticated Chrome.
3. **Screenshot tool flakiness** in `claude-in-chrome`: a long-lived tab's computer screenshot action can time out or return 0-width. Opening a fresh tab (`tabs_create_mcp`) reliably fixes it.
4. **``resize_window`` doesn't reliably change the real rendered viewport** in this environment. To test a specific Tailwind breakpoint (e.g. the `lg:1024px` cutoff), inject a temporary `<style>` override via `javascript_tool` forcing the relevant classes, rather than trusting the `resize`.
5. ****/plugin slash command is unavailable in this desktop-app environment**** — can't install marketplace skills/plugins (e.g. the user tried `ui-ux-pro-max-skill` from GitHub) from within this session.

Current deployment status

Everything described in this document is live in production as of this writing — the full multi-page split, new profile photo, "I'm Mitch" hero redesign, hover/motion polish, `TrackerSection/AboutTeaser/ProductsTeaser`, the `/partnerships` Media Kit page, the enlarged Ask Mitch link, and the photo hover shimmer were all promoted to production and verified working at <https://zaesmls.vercel.app> (photo confirmed rendering correctly on the real domain, not just preview).

There is no pending preview batch waiting on approval. Any new preview URL from `vercel deploy` in a future session is for whatever gets built **next**, not a backlog from this handoff.

Immediate next step

No specific pending action — check in with the user for what they want to work on next. See "Other open items" below for things that were raised but never resolved, in case one of those is where they want to pick back up.

Other open items (lower priority, no action needed unless asked)
